E – Commerce order management database system

Week 1| Database Management systems

Organic Food Store Management System

Green groove- organic food store

1. Introduction

The Organic Food Store Management System is a database application designed to manage the online purchase and sale of organic food products. The system allows customers to browse organic products, place orders, make payments, and track deliveries.

It helps store owners manage product details, supplier information, inventory, customer orders, and sales records efficiently. The system ensures better management of organic food supply and provides a convenient shopping experience for customers.

2. Scope

The system includes:

- Customer registration and login
- Organic product management
- Product category management
- Supplier management
- Shopping cart management
- Order placement and tracking
- Payment management
- Inventory management
- Delivery management
- Admin control
- The system does not include:
- Farming management

- Direct farmer monitoring
- Online nutrition consultation
- Automated quality testing

3. Problem Statement

Traditional organic food stores face difficulties in maintaining product records, tracking stock availability, managing customer orders, and handling sales information manually.

Customers may also find it difficult to identify available organic products and purchase them conveniently.

The Organic Food Store Management System provides an online platform to manage organic products, customer orders, payments, and deliveries efficiently while maintaining accurate database records.

4. Stakeholders

- Stakeholder
- Responsibility
- Customer
- Browse organic products, place orders, make payments
- Admin/Store Owner
- Manage products, users, orders, and reports
- Supplier/Farmer
- Provide organic products and update supply details
- Delivery Staff
- Deliver products to customers
- Payment Gateway
- Process online payments

5. Non-Functional Requirements

- ID
- Type
- Requirement

- NFR-01
- Performance
- The system should provide quick access to product and order information.
- NFR-02
- Security
- Customer and payment details must be securely stored.
- NFR-03
- Reliability
- Product and order data should be maintained accurately.
- NFR-04
- Scalability
- The system should support increasing customers and products.
- NFR-05
- Availability

The system should be available 24×7 for online shopping.

6. System Modules

- Module
- Description
- Customer Module
- Customer registration, login, and profile management
- Product Module
- Manage organic food products and details
- Category Module
- Classify products such as fruits, vegetables, grains, etc.
- Supplier Module
- Maintain farmer and supplier information
- Cart Module
- Add and manage selected products
- Order Module

- Process and track customer orders
- Payment Module
- Store payment details and transaction status
- Inventory Module
- Monitor product quantity and availability
- Delivery Module
- Manage delivery details and status
- Admin Module
- Overall system management

7. Input Requirements

The system requires:

- Customer details (Name, Email, Phone, Address)
- Product details (Product ID, Name, Category, Price)
- Organic certification details
- Supplier/Farmer details
- Product quantity and stock details
- Order details
- Payment information
- Delivery address

8. Output Requirements

- The system generates:
- Customer profile details
- Organic product catalog
- Product availability status
- Order confirmation
- Invoice
- Payment receipt
- Delivery tracking details
- Inventory report

- Sales report
- Supplier details

9. Constraints

- Internet connection is required.
- Customers must register before placing orders.
- Products should be available in stock before order confirmation.
- Organic product expiry dates must be maintained.
- Payment processing depends on the payment gateway.
- Database should support MySQL or Oracle SQL.

10. Conclusion

The Organic Food Store Management System provides an efficient solution for managing online organic food sales. It simplifies product management, customer ordering, payment processing, inventory tracking, and delivery management. The system improves business operations and provides customers with a convenient platform to purchase healthy organic products.
